EMERGENCY LIGHTING

GENERAL CATALOG 22.1.

**WE CARE ABOUT SAFETY**  
EMERGENCY LIGHTING

Photographs and parameters of the products shown in this catalogue are for reference only and cannot be relied upon as a legal offer. Certain parameters of supplied products may differ from the parameters of the products described in this catalogue. The appearance of actual products may slightly differ from the photographs and drawings contained in this catalogue. AWEX reserves the right to discontinue products shown in this catalogue or to modify their parameter without notice.

# Awex

"Customer and his satisfaction" is the slogan that has been accompanying us since the very beginning of AWEX company.

We always consider the valuable feedback from our customers during the concept stage of new product development itself. This is the main reason why we consider our clients as our partners.

Together we make sure that the products designed and manufactured by AWEX are in line with the expectations of our customers.

The AWEX Research and Development team is guided by the values of:

# Safety

It is the essence of the industry; we are a professional company with full own facilities for development, testing and production of devices related to Emergency Lighting and Fire Alarm Systems.

All design and production facilities are located in Poland, which means that we are able to respond to virtually any industry demand.

Our specialized advisers are always ready to support our partners in the selection of AWEX brand equipment meeting the expectations.

# Design

We know that appearance is important for our partners; that's why we design our products in line with current trends. We try to combine tradition with modernity.

That is why our products can be used in very modern buildings as well as revitalized or even historical ones.

# Ergonomics of assembly

Time is one of the crucial element for everyone. So we make our process of production and assembly as fast and effective as possible with hundred percentage accuracy.

This helps our partners to save a lot of time and money with a satisfied product.

# Quality and excellence

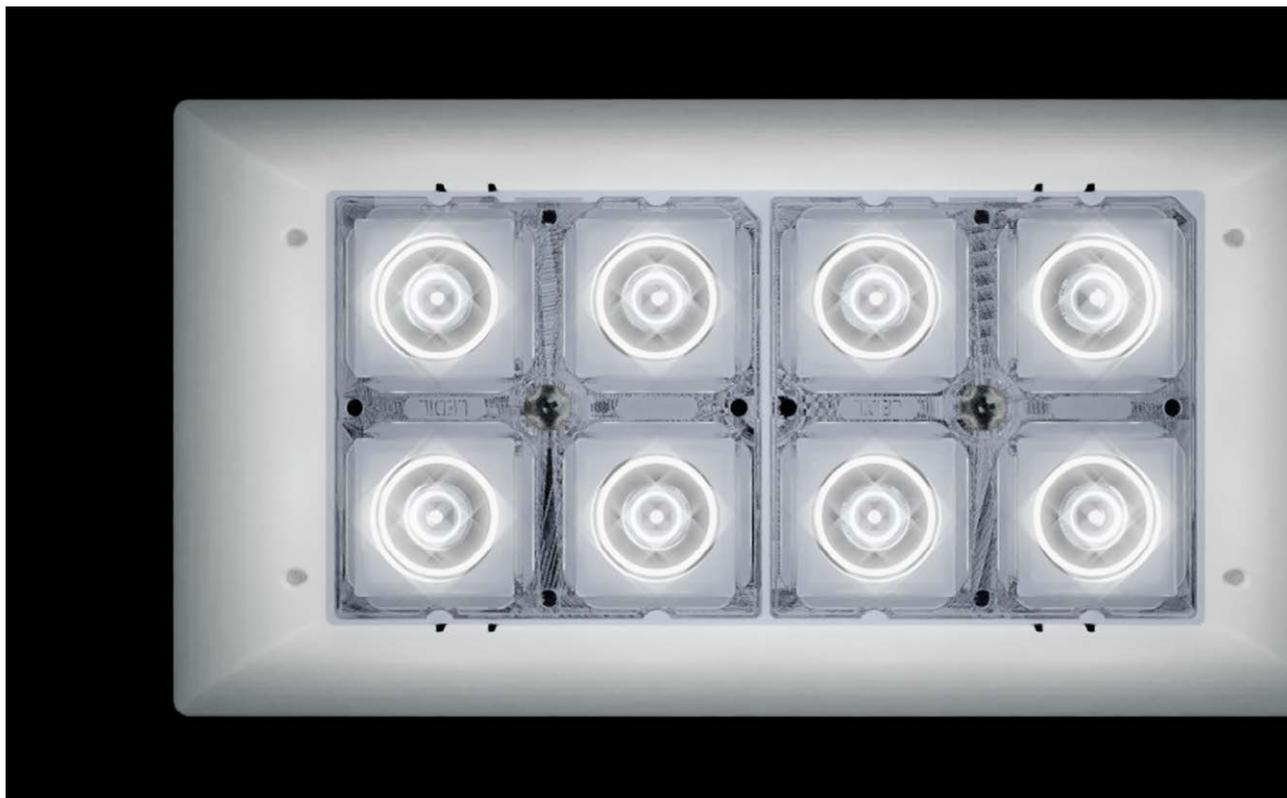

Is one of the important key values of AWEX. We challenge ourselves to maintain the product quality according to the changing customer demands. For that we have a wing of experienced people with technical excellency. We never compromise on the quality. Therefore we select highest quality components and latest available technology which make the product to the highest level, which is internationally certified.

# Energy efficiency and ecology

Are another important factors that everyone is concerned about. Because they allow for further measurable impact on the running cost and adverse environmental effects. In order to meet this, we design all our solutions energy efficient as possible, which allow our products to be used in top performance, ecological and energy efficient building.

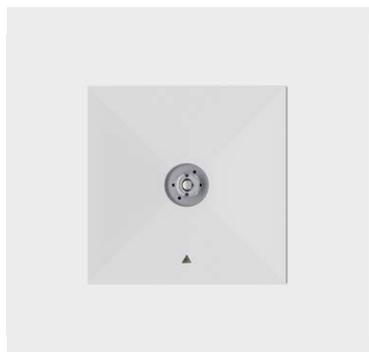

# Versatility

Is a salient feature which is important for our partners because, it allows our partners to use our solutions in various application. Therefore, already at the design stage, we provide our products with functionality in line with the recipient's expectations at every moment of the investment. Our products are compatible with each other and allow the independent and controlled use via a monitoring system or central battery.

# Optics:

## OPTIC C

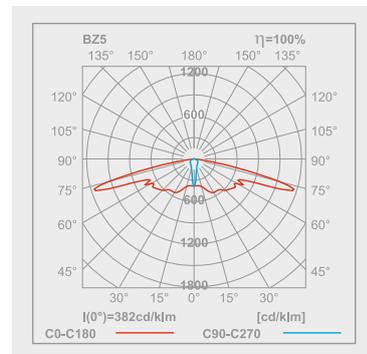

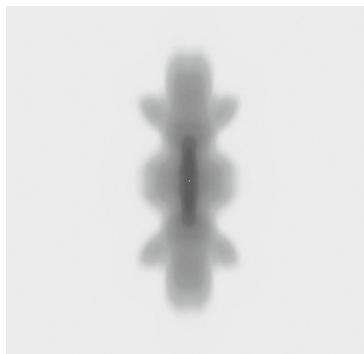

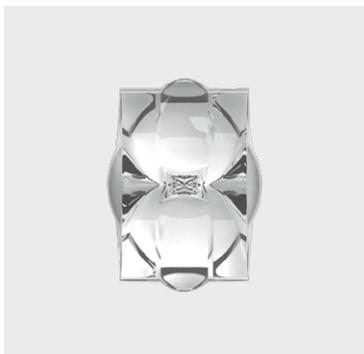

DESCRIPTION: DESIGNED TO ILLUMINATE NARROW CORRIDORS OR ESCAPE ROUTES WITH ASYMMETRIC NARROW BEAM.  
APPLICATION: CORRIDORS OF OFFICES, HOTELS AND RESIDENTIAL BUILDINGS, RACKING AISLE SPACE IN SHOPS/WAREHOUSES.

## OPTIC R

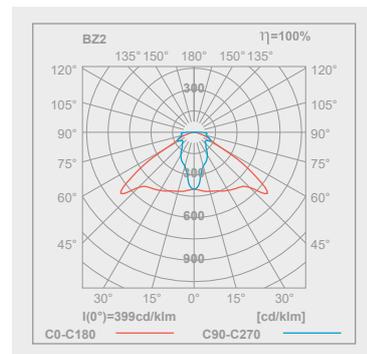

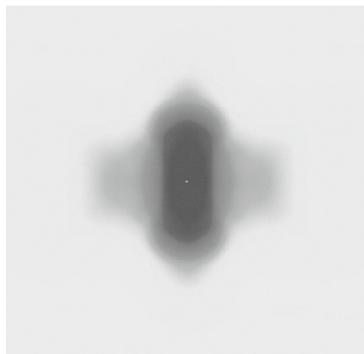

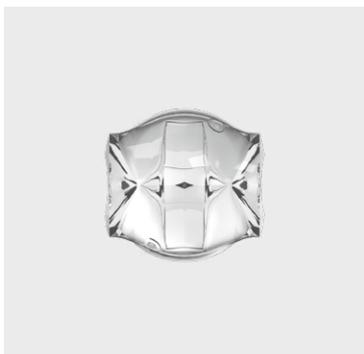

DESCRIPTION: DESIGNED TO ILLUMINATE CORRIDORS OR ESCAPE ROUTES WITH A WIDTH GREATER THAN 2M AND MEDIUM CEILING HEIGHT.  
APPLICATION: GARAGES, RESIDENTIAL AND OFFICE BUILDINGS, HEALTHCARE BUILDINGS.

## OPTIC R1

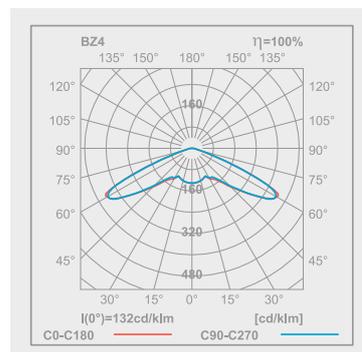

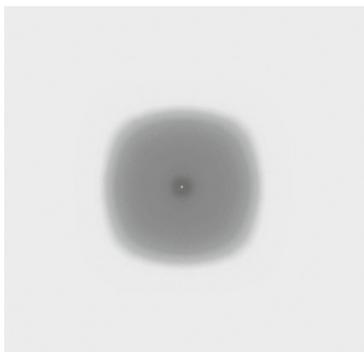

DESCRIPTION: DESIGNED TO ILLUMINATE CORRIDORS OR ESCAPE ROUTES WITH A WIDTH GREATER THAN 3M AND SMALL CEILING HEIGHT.  
APPLICATION: RESIDENTIAL, OFFICES AND HEALTHCARE BUILDINGS.

## OPTIC R2

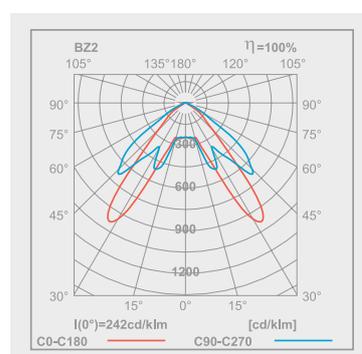

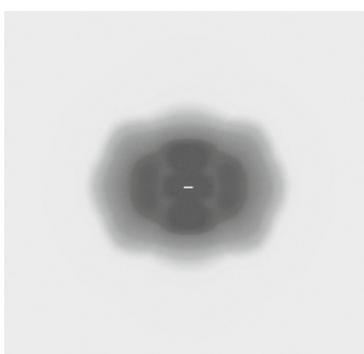

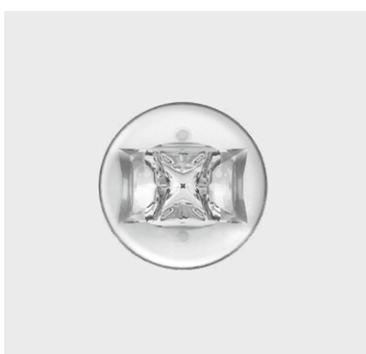

DESCRIPTION: DESIGNED TO ILLUMINATE CORRIDORS OR ESCAPE ROUTES WITH A WIDTH GREATER THAN 2M AND LARGE CEILING HEIGHT AND FOR THE AREAS WHERE HIGH INTENSITY OF EMERGENCY LIGHT IS REQUIRED.  
APPLICATION: SHOPPING ARCADES, LOBBIES, HALLS AND CORRIDORS REQUIRING INCREASED EMERGENCY LIGHT INTENSITY.

## OPTICO

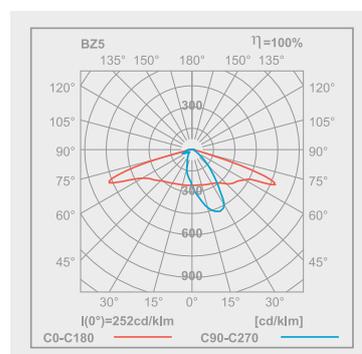

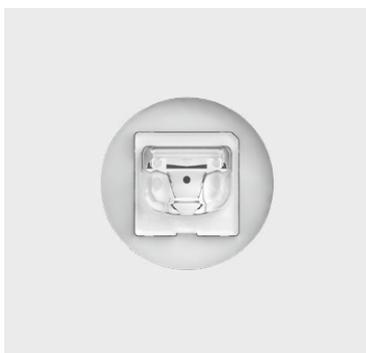

DESCRIPTION: DESIGNED TO ILLUMINATE LARGE AREAS EVEN FROM A SMALL HEIGHT WITH WIDE SYMMETRICAL LIGHT DISTRIBUTION.  
APPLICATION: OPEN AREAS, GARAGES, CINEMA THEATERS, PRODUCTION HALLS.

## OPTIC U

DESCRIPTION: DESIGNED TO ILLUMINATE OPEN AREAS WITH MEDIUM AND HIGH CEILING HEIGHTS AND FOR THE AREAS REQUIRING HIGHER LIGHT INTENSITY.  
APPLICATION: HOTEL LOBBIES, CONFERENCE HALLS, PRODUCTION HALLS.

## OPTICA

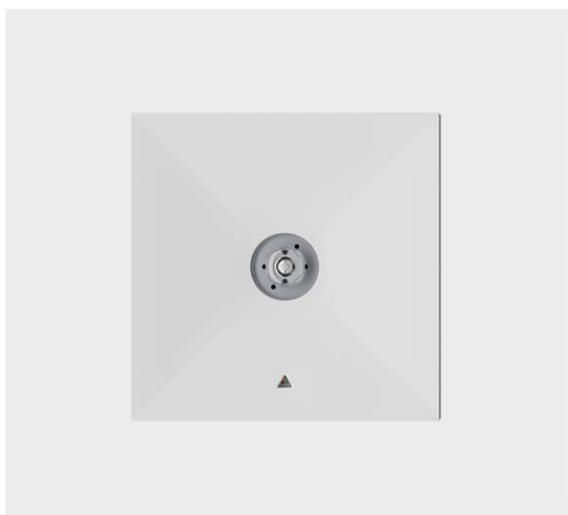

DESCRIPTION: DESIGNED TO ILLUMINATE A CERTAIN AREA FROM WALL; ESPECIALLY FIREFIGHTING EQUIPMENT.  
APPLICATION: AREAS WHERE CEILING MOUNTING OF LIGHTS ARE NOT POSSIBLE.

## Quality and efficiency

LOVATO 3 family is a type of emergency luminaires designed for flush mounting or for on-ceiling mounting inside buildings. Its compact size makes it easy to be incorporated into the surface. It also goes very well with basic lighting luminaires. The luminaire is made of high-quality components (e.g. highly efficient PowerLed light sources with individually designed lenses) so that it is characterised by above-average parameters in terms of luminous flux and wide light distributions, which allow for the individual selection of luminaires depending on the needs of the future facility user.

### CEILING INSTALLATIONS

Recessed installation

# Design and versatility

While designing the LOVATO 3 family, we aimed at ensuring ergonomic installation which ease the maintenance of luminaires. The luminaire is often used in office spaces, shopping malls (including tenant's areas) and social rooms.

## Quality and efficiency

AX 3 family is a type of universal emergency luminaires designed for ceiling mounting or for flush mounting inside buildings. The luminaire is made of high-quality components (e.g. highly efficient PowerLed light sources with individually designed lenses) so that it is characterised by above-average parameters in terms of luminous flux and wide light distributions, which, in turn, enables extensive areas to be illuminated, also at high altitudes.

# Design and versatility

Its discreet design and enhanced ingress protection make it possible to use it in a number of facilities where, due to functionality, a small luminaire, but with high applicability, is required. It is often used in office spaces, shopping malls, communication routes as well as toilets and social rooms.

## Quality and efficiency

LOVATO series is a type of emergency luminaires designed for surface mounting inside buildings. With its small size and variant colours, it can be discretely incorporated into the surface. While designing the LOVATO II, we aimed at ensuring ergonomic installation so that our partners can save time during the installation and maintenance of luminaires. The luminaire is made of highquality components with option of different light output and individually designed lens.

# Design and versatility

LOVATO P series is a type of emergency luminaires designed for flush mounting inside buildings. Square shape goes very well with main lighting luminaires. The luminaires are made of smooth polycarbonate body, high-quality efficient PowerLED light sources with individual designed state of the art lenses. Combination of less power with high luminous flux covers wide light distribution with less power consumption. The luminaire is excellent for office spaces, shopping malls (including tenants' areas), hotels, hospitals, airports, train & bus stations, more precisely in communication routes, restaurants, meetings rooms. Depending on visual preferences, it can replace AXP luminaire.

## Quality and efficiency

AX series is a decorative type emergency light designed for both flush and surface mounting inside the building. The luminaire is made of round shape polycarbonate body, high-quality components (e.g. highly efficient PowerLed light sources with individually designed lenses) with above-average luminous fluxes from small housing. Its discreet design give possible to use it in a number of facilities where small luminaire with high applicability is required.

Like office spaces, shopping malls, hotels, hospitals, airports, train & bus stations, more precisely in communication routes, restaurants, meetings rooms. Depending on visual preferences, it can replace LVP luminaires.

# Design and versatility

AXN series is a type of emergency luminaires designed for surface mounting, both indoors and outdoors (high ingress protection IP65). Mentioned in turn, enables extensive areas to be illuminated also from high altitudes. Additionally, with the optional use of heater HTR-25 system made by AWEX, the AXN luminaire is suitable for difficult environmental conditions (low temperatures).

# Micro size with max illumination

MICRO SPOT series is a new concept of emergency luminaires designed for flush mounting inside buildings, or main lighting luminaires. Its small size makes it easy to be incorporated into the surface. The luminaire is made of high-quality components and the ability to select the power/light output along with an individually designed lens. With newly designed lenses light can be concentrated along corridors or spread through open spaces. It is often used in office spaces, shopping malls, communication routes and social rooms.

## Stainless steel body

EYE LED series is a high end line of emergency luminaires designed for flush mounting inside buildings. Stainless steel body with small round shape goes very well with other luminaires. The luminaire is made of high-quality components and the ability to select the power/light output along with an individually designed lens.

# Durability and efficiency

MX range is waterproof and has high impact resistance and can be installed in the most tough conditions. Main application of the MX fixture is double-height areas, due to high power, high efficiency and innovative optics for escape routes and open spaces.

## Sleek design for the toughest conditions

OUTDOOR LED series is an emergency escape luminaire designed for surface wall mounting, mainly outdoors because of high ingress protection IP 66 and enhanced resistance parameters. Due to its optional colour versions, the luminaire can be successfully incorporated into building façades, thus becoming their integral part.

# Unique appearance

The luminaire is made of high-quality components (e.g. highly efficient PowerLed light sources) so that it is characterised by above-average parameters in terms of luminous fluxes. It can provide extra illumination for special places such as hydrants or first aid points. In addition, with the use of heater HTR-25 system made by AWEX, the OUTDOOR LED luminaire is suitable for difficult environmental conditions (low temperatures). It is particularly recommended to be used in the vicinity of any final exit, so fire brigades can enter the building through lighted doors.

## Compact design

EDGE series is a new concept of main lighting luminaires in symbiosis with emergency lighting. It is designed for surface mounting to walls or ceilings inside buildings. The luminaire is made from high-quality components with different power/light source for both main and emergency lighting. Incorporated movement sensor makes it perfectly suitable for staircases, when power supply is from integrated battery, or centralised systems.

# Solid construction

HELIOS series is a type of emergency or escape-sign luminaires designed for surface mounting, with ceiling/wall/ceiling pipe bracket, protected with wire guard (to get IK10). It was developed to meet the needs of the most demanding installations. The luminaire is made of high-quality components using highly efficient light sources so that it is characterised by above-average parameters in terms of luminous flux. High ingress protection IP65 and a variety of led light sources (different lumen output) make it ideal choice for large industrial areas, warehouses with high ceiling, parking areas, tunnels, for both showing way out from site or lighting it.

In addition, with the use of heater HTR-25 system made by AWEX, the HELIOS LED luminaire is suitable for difficult environmental conditions (low temperatures).

## MATERIALS

White polycarbonate body • Transparent polycarbonate cover

## MOUNTING

Surface

## POWER SUPPLY

Self contained – 220 - 240VAC/50 - 60Hz  
Central battery – 220 - 240VAC/50 - 60Hz; 176 - 275VDC  
Central battery FZLV II – 48VDC  
Central battery FZLV – 24VDC

## LIGHT SOURCE

1W, 2W, 3W, 4W, 3x1W, 6x1W LED  
**Colour temperature:** 6000K  
**Lifetime:** 50000h

## CHARGING

**Standard:** max. 24h  
**Premium:** max. 12h; energy-saving electronic charger

## AUTONOMY AND BATTERIES

**Standard:** 1h or 3h, Ni-Cd 3,6V batteries  
**Premium:** 1h or 3h, LiFePO<sub>4</sub> 6,4V batteries

## INSULATION CLASS

II or III

## IP & IK RATING

IP42 or IP65, IK08

## AMBIENT TEMPERATURE

**Self-contained:**  $t_a$ : 0°C ÷ 40°C •  $t_a$ : -25°C ÷ 40°C – together with heater for low temperatures  
**Central battery:**  $t_a$ : -25°C ÷ 50°C

## OPTIONS

SE – non maintained • SA – maintained • AT – autotest • PT – manual test button  
• RU – Rubic UNA central monitoring • RW – Rubic UNA Wireless central monitoring  
• RD – DALI central monitoring • FZLV – central battery FZLV 24VDC • FZLV2 – central battery FZLV II 48VDC • CB – central battery

## ADDITIONAL INFORMATION

LED indicator signalizes mains power supply and battery charge • Deep discharge protection  
• Optional adaptation of the fixture for low temperatures up to -25°C with HTR 25  
• III class of insulation of FZLV and FZLV2 version

# One design for multiple application

EXIT series is a conventional emergency or escape-sign luminaire designed for variety of installation like surface, flush, wall/ceiling (with wire guard), ceiling-pipe mounting. Its minimalist design and maximum functionality make it ideal for use both inside and outside buildings. The luminaire is made of high-quality components so that it is characterised by above-average parameters in terms of luminous flux. In addition, with the use of heater HTR-25 system made by AWEX, the EXIT luminaire is suitable for difficult environmental conditions like cold warehouses, mechanical/electrical rooms, kitchens, laundry/washrooms.

## High ingress protection

IK2 W series is a special emergency or escape-sign luminaire for surface wall/ceiling mounting. The luminaire is made of high-quality components using highly efficient light sources with above-average parameters in terms of luminous fluxes as well as visibility and uniform pictogram backlight. High ingress protection (IP65) and impact resistance (IK10) including a wide selection of versions make it an ideal choice for communication routes, tunnels, as well as public transport stations.

# Quality and excellence

TIGER series is an emergency or escape-sign luminaire designed for flush or surface mounting inside buildings. The luminaire is made of high-quality components using highly efficient light sources so that it is characterised by above-average parameters in terms of luminous fluxes. It is often used in staff communication routes, staff toilets and back door rooms.

# Minimalised design for all mounting options

INFINITY II series is a universal escape-sign luminaire for surface, flush or suspended mounting on any wall or ceiling. The luminaire is made of high-quality components using highly efficient light sources so that it is characterised by above-average parameters in terms of visibility and uniform pictogram backlight. The revolutionary technological solution of using additional light source allows the product to be used as both escape-sign luminaire and emergency luminaire. With its double function, the luminaire is particularly recommended to be used in the vicinity of any final exits and special places such as hydrants or first aid points to mark them and provide extra illumination.

## Multitasking and good design

SK-8 series is a universal escape-sign luminaire designed for surface and flush mounting inside buildings. Its light weight and slim construction makes the light compatible to be incorporated into the surface. The luminaire is made of high-quality components using highly efficient light sources so that it is characterised by above-average parameters in terms of visibility and uniform pictogram backlight. It can be used in office spaces, communication routes, large rooms where 30m viewing distance should be covered.

# High end design

Escape Alu is a new concept of emergency exit signs designed for mounting inside buildings. The decorative light with aluminum body meets the requirements of modern installations. We use high quality components and extremely efficient light sources, which makes the luminary stand out with above-average parameters in terms of visibility and uniformity of the pictogram backlight. It is particularly used in offices, communication corridors and social rooms.

## Design and clarity

TWINS series is a decorative type escape-sign luminaires designed for surface wall/ceiling mounting inside buildings. Aluminium construction is available in white/silver colours. The luminaire is made of high-quality components using highly efficient light sources so that it is characterised by above-average parameters in terms of visibility and uniform pictogram backlight. Open area, or communication routes where 30 m viewing distance should be covered requires this type of luminaire.

## Durable housing

PLEXI LED series is a classic line of escape-sign luminaires with stainless steel body designed for flush mounting inside buildings. The luminaire is made of high-quality components using highly efficient light sources so that it is characterised by above-average parameters in terms of visibility and uniform pictogram backlight. Communication routes where 30 m viewing distance should be covered requires this type of luminaire.

## For special applications

CUBE 2 series is a conventional multi-directional escape-sign luminaire for surface or suspended mounting. It's designed to be visible from all possible directions of evacuation and to meet the requirements of large surfaces. The luminaire is made of high-quality components using highly efficient light areas so that it is characterised by above-average parameters in terms of visibility and uniform pictogram backlight. Energy efficient LED technology, metal body and use of plexi-glass ensures the high strength and durability of the luminaire. With its visibility, it is able to cover large open space areas, public transport stations or at crossed corridors.

# Modern body, universal use

SCREEN 2 series is a conventional escape-sign luminaire for surface or suspended mounting, designed to meet the requirements of large surfaces. With its dimensions, it is able to ensure high visibility at a distance of up to 60 meters, while offering energy efficiency with the use of LED technology. The luminaire is made of high-quality components using highly efficient light sources so that it is characterised by above-average parameters in terms of visibility and uniform pictogram backlight. Its metal body and use of plexi-glass with increased resistance ensures the high strength and durability of the luminaire. It is often used in large areas like airports, shopping malls, big communication stations/routes.

Protection against mechanical impact

Viewing distance d=25 m

Viewing distance d=20 m

Adaptation of the fixture for low temperatures up to -25°C

**AC**  
220-240V  
50-60Hz

The permissible range of AC input voltage

**DC**  
176-275V

The permissible range of DC input voltage

**DC**  
24V

Safety extra low voltage 24VDC SELV

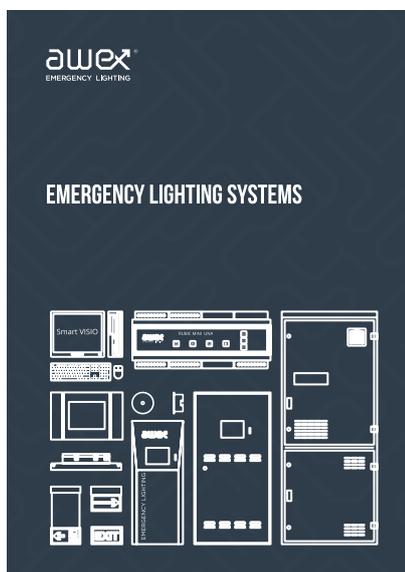

**DC**  
48V

Safety extra low voltage 48VDC SELV

**LED**

Light source type - LED
